Dax Query Plans Sqli

Events in Progress analyzes a non-trivial query and illustrates the differences in query plans of more optimized DAX versions of the same query. The goal of the paper is to introduce the reading of a query plan. A more detailed analysis of each operation in the query plan will be the topic of a future paper.

Understanding DAX Query Plans - SQLBI
Understanding DAX query plans is a long process. We start with very simple queries and only when these basic concepts are clear enough, we will dive into the complexity of DAX expressions. Our first query is amazingly simple and it runs on the Contoso database: EVALUATE ROW ("Sales", SUM (OnlineSales[SalesAmount]))

DAX Query Plans - SQLBI

Optimizing & Analyzing DAX Query Plans - SQLBI. DAX is super-fast, you can use it to query billions of rows in less than one second. End of marketing, now let's go back to the real world. If your query is not performing as advertised, it is time to dive into the details of optimizations, which means catching the query plan with the profiler, understanding what is happening under the cover and rephrase your query, or re-shape your model so to obtain better performance.

Optimizing & Analyzing DAX Query Plans - SQLBI

Topic: Query Plans. Every DAX query generates query plans describing operations performed by the xVelocity (VertiPaaS) engine. This page contains documents and resources enabling you to read these query plans and use such information to optimize your DAX queries.
