Acid-base balance
Acids are electrolytes that release hydrogen ions (H^+) when they are dissolved in water. Bases are electrolytes are release hydroxide ions (OH^-) when they are dissolved in water. Acid-base balance is primarily regulated by the concentration of H^+ (or the pH level) in body fluids, especially ECF.

Fluids and electrolytes play a vital role in homeostasis within the body by regulating various bodily functions including cardiac, neuro, oxygen delivery and acid-base balance and much more. Electrolytes are the engine behind cellular function and maintain voltages across cellular membranes.
