Dear Colleagues, Ovarian cancer is a major public health concern and remains the deadliest form of gynecological malignancy. Despite survival rates for a number of solid tumors having improved significantly in the last 50 years, the five-year overall survival rate for ovarian cancer has remained stagnant at around 45-47% since the introduction of platinum-taxane chemotherapy following ...

Ovarian cancer can occur at any age but is most common in women ages 50 to 60 years. Inherited gene mutations. A small percentage of ovarian cancers are caused by gene mutations you inherit from your parents. The genes known to increase the risk of ovarian cancer are called breast cancer gene 1 (BRCA1) and breast cancer gene 2 (BRCA2).

In parallel, the International Federation of Gynecology and Obstetrics (FIGO) reviewed and updated the surgical staging system, applied to all histotypes of ovarian, tubal, and peritoneal cancers, also published in 2014 [5, 6]. In both cases, the changes made are meant to encompass a better understanding of malignant tubo-ovarian disease, but ...

### **The new classifications of ovarian, fallopian tube, and ...**

A family history of ovarian cancer is a risk factor for ovarian cancer. People with hereditary nonpolyposis colon cancer (Lynch syndrome), and those with BRCA-1 and BRCA-2 genetic abnormalities are at increased risk.. The major genetic risk factor for ovarian cancer is a mutation in BRCA1 or BRCA2 genes, or in DNA mismatch repair genes, which is present in 10% of ovarian cancer cases.
